

SlideShowSelector Quick Start

1 Click open folder and select a folder with photos (you can do it for each of your files, if you have several)

3 Mark photo interest with a star level

5 After marking your photos, switch to request mode and set up what you want to retrieve. You can see the number of photos found on the top in photo qty area (the software searches in all your photo folders)

4 Right click on a column to add a person, an event ... and click them to set this property on current photo

2 Use right and left arrows to change current photo

6 Click start slideshow and enjoy
